# TestVantage product showcase

**JEE Main / JEE Advanced / NEET**

One product for serious practice: real exam patterns, a living question bank, and analysis that tells a student *what to do next* -- not only the score.

This file is for founders, teachers, and demos. Everything here is in the app today. Limits are listed at the end so nobody oversells.

**How to open this file (no F5):** In Cursor press **Ctrl+P**, type `TESTVANTAGE-PRODUCT-GUIDE`, press Enter.

**How to open the app (F5):** Press **F5**, keep the bottom panel open, use **Cursor's built-in browser**, go to **http://127.0.0.1:5173/** -- not `localhost`. Question Bank: **http://127.0.0.1:5173/question-bank**.

4. Live exam
5. Results, weak chapters, AI next steps
6. Insights
7. Compete
8. Question Bank
9. Teaching and school
10. Honest limits

---

## The promise in one page

| Who | What they get | Why it matters |
|---|---|---|
| **Student** | Mocks, chapter drills, PYQ, daily habit -- then a result that names weak chapters and a next drill | Stops guessing. Every attempt becomes a plan. |
| **Teacher** | Own bank (type or scan), review drafts, build papers, see the same analysis students see | Institute quality without renting someone else's papers. |
| **Institute / admin** | Schools, classes, assigned mocks, OCR settings, go-live checks | One workspace from bank to class results. |

**Not this product:** live video classes, a phone app, or a fee-scholarship test. Until go-live it runs on this computer in Cursor's browser.

# 1. Start here -- sign in and Home

## Sign in

**What it is.** Three doors: Student, Teacher, Admin. Students can create an account. Teachers use a login an admin created.

**Where to click.** Top right -> **Sign in** -- http://127.0.0.1:5173/login

**Why it helps.** Results and bank stay tied to the right person. Guests can try tests, but those scores live only in this browser.

**What they see.** After login: students -> Home; teachers -> Teacher home; admins -> Question Bank. A small pill shows Student / Teacher / Admin.

## Home

**What it is.** The student's starting board -- shortcuts into Prepare, Compete, and Insights, plus a chapter-strength ring after they have sat papers.

**Where to click.** Top nav -> **Home** -- http://127.0.0.1:5173/home

**Why it helps.** No hunting through menus on exam week. Weak-chapter strength is visible before they pick today's work.

**What they see.** Featured jumps (Form Forecast, Career Compass, Today's Drill), then three columns: Prepare, Insights, Compete. Teachers are sent to Teacher home instead.

## Tour and How we compare

**What it is.** A map of real pages, plus a plain public-feature map versus other JEE/NEET products (their public claims only -- not their papers or brand).

**Where to click. More -> TestVantage Tour** -- http://127.0.0.1:5173/tour -- **More -> How we compare** -- http://127.0.0.1:5173/how-we-compare

**Why it helps.** Founders and teachers can walk a demo without memorising URLs, and plan honestly.

**What they see.** Clickable page list and a two-column "they / we" map.

---

# 2. Prepare centre -- every way to practise

One hub. Old bookmark /prep-hub lands here too.

**Where to click.** Top nav -> **Prepare** -- http://127.0.0.1:5173/prepare

**Why it helps.** The student picks the *mode* that matches today's goal: full mock, quiet chapter work, speed, formulas, or last year's papers -- without mixing them up.

| Feature | Benefit in one line |
|---|---|
| AI Mock Builder | A full NTA-style paper in minutes, on *their* syllabus |

| | |
|---|---|
| Syllabus Practice | Untimed accuracy before they race the clock |
| Precision Speed | Fast recall on easier items -- 15 to 60 minutes |
| CDF Mastery | Concept, definition, formula sprints with a timer per question |
| Quick Revision | Chapter cheat sheet + TestVantage PDF |
| My Formula Sheet | Pin the formulas they keep forgetting |
| Today's Target | Today's question count on *weak* chapters |
| Daily Practice Sheet | Dated chapter DPP to attempt or print |
| Placement check | Short mix -> weak chapters locked as today's plan |
| Series calendar | Week-by-week mock dates (your papers) |
| PYQ Bank | Six ways to train on previous-year items only |
| Official mocks | What the teacher assigned, plus catalog papers |

## AI Mock Builder

**What it is.** The student chooses exam, syllabus, and paper type. The product assembles an NTA-style paper (full, one subject, one chapter, or **Real-Time Calibrated** -- level can move after each answer). It aims for about 10-25% PYQ when the bank has them.

**Where to click.** Prepare -> **AI Mock Builder** -- http://127.0.0.1:5173/mock-test

**Why it helps.** Full mocks without waiting for a teacher to publish. Calibrated mode finds true level instead of a one-size paper.

**What they see.** Exam cards, paper types, syllabus picker, a short paper summary, then **Start**. After submit: full result (section 4).

## Syllabus Practice

**What it is.** Untimed batches by subject, unit, and chapter. Pause and continue. The picker can mix difficulty and include PYQ. Result coach and Revision Ladder can **pre-fill** the weak chapter.

**Where to click.** http://127.0.0.1:5173/practice

**Why it helps.** Builds accuracy before timed mocks. The "next drill" from analysis lands here so the student does not hunt for the chapter.

**What they see.** Syllabus tree, batch of questions, no exam tab-lock. After a batch: result, then **Continue** or stop.

## Precision Speed Test

**What it is.** 15 / 30 / 45 / 60 minutes on easier questions (toughness 1-3).

**Where to click.** http://127.0.0.1:5173/speed-test

**Why it helps.** Lifts pace without burning a full mock.

**What they see.** Duration pick, syllabus, paper preview, timed exam, then the same analysis family.

## CDF Mastery Test

**What it is.** Concept / Definition / Formula. 15 or 30 minutes. One timer per question (Math 30s, Physics 25s, Chemistry/Biology 20s). SCQ and True/False only, easiest band.

**Where to click.** http://127.0.0.1:5173/cdf-test

**Why it helps.** Revision sprints: fundamentals under a clock, not a three-hour paper.

**What they see.** Per-question countdown; auto-advance when time ends; then result.

## Quick Revision (chapter cheat sheet)

**What it is.** Definitions, standard formulas, extra formulas, and pitfalls **by chapter**. Starter pack is built in. **AI complete** can fill a fuller sheet when Gemini is set. Download a PDF with the **TestVantage** name. Does **not** touch the question bank.

**Where to click.** http://127.0.0.1:5173/quick-revision

**Why it helps.** Last-night revision without opening Question Bank. Teachers can force-regenerate a sheet.

**What they see.** Exam -> subject -> chapter -> readable sheet -> pin formulas -> PDF download. If a sheet looks thin, that is the starter pack until AI complete (or a teacher edit).

## My Formula Sheet

**What it is.** Personal pocket sheet: pin formulas from Quick Revision.

**Where to click.** http://127.0.0.1:5173/formula-sheet

**Why it helps.** One page of *their* weak formulas, branded PDF.

**What they see.** Pinned cards, unpin, download.

## Today's Target

**What it is.** Set 15 / 25 / 40 questions on up to three weak chapters, then drill in Syllabus Practice. Separate from Today's Drill (mixed daily set).

**Where to click.** http://127.0.0.1:5173/daily-target

**Why it helps.** Turns backlog into a number they can finish today.

**What they see.** Suggested weak chapters from attempts, progress for today, **Start practice**.

## Daily Practice Sheet

**What it is.** Dated chapter DPP (6 / 8 / 10 / 12 questions) from the published bank, or a starter pack if the bank is thin. Attempt online or print a TestVantage sheet.

**Where to click.** http://127.0.0.1:5173/daily-sheet

**Why it helps.** After-class sheet habit without mixing it with the Compete daily quiz.

**What they see.** Exam, subject, chapter, count, attempt or print. Printed sheets do not include answers.

## Placement check

**What it is.** About 15 mixed questions. After the paper, weak chapters can lock into Today's Target. **Not** a scholarship or fee-discount test.

**Where to click.** http://127.0.0.1:5173/placement-check

**Why it helps.** "Where do I stand?" then an immediate plan.

**What they see.** Short exam -> summary of weak chapters -> lock as today's target.

## Series calendar

**What it is.** Week-by-week dated Pro Series for JEE and NEET. Your papers -- not another institute's All-India brand.

**Where to click.** http://127.0.0.1:5173/test-series

**Why it helps.** A visible mock schedule so "I'll start later" becomes a date.

**What they see.** Series cards, dates, start when ready.

## PYQ Bank (six modes)

**What it is. Only** previous-year questions. Syllabus Practice on Prepare can mix bank items and PYQ. PYQ Bank is 100% past papers.

**Where to click.** http://127.0.0.1:5173/pyq

**Why it helps.** Exam flavour without mixing in new items. Year-wise sitting trains the real paper shape.

**What they see -- pick a tab first:**

1. **Syllabus Practice** -- untimed PYQ by chapter
2. **Comprehensive PYQ Test** -- full timed paper
3. **Subject PYQ Proficiency** -- one subject, shorter
4. **Chapter PYQ Proficiency** -- chapter/topic, shorter
5. **Real-Time Calibrated PYQ** -- level moves with answers
6. **Year-wise Paper** -- year -> date/shift or Paper 1-2

Admins also see official-paper import and **Gemini PYQ-style** drafts (labelled; not licensed NTA dumps).

## Official Mock Tests

**What it is.** Teacher-assigned papers plus catalog mocks when published.

**Where to click.** http://127.0.0.1:5173/tests

**Why it helps.** The "real" institute paper sits next to self-built mocks.

**What they see.** List of papers, start, then live exam.

## 3. Live exam

**What it is.** The timed paper: palette, mark for review, sections. Full mocks can follow NTA section order (Physics, then Chemistry, then Math). Calibrated papers pick the next question from live ability and show standing. Opening another tab can **auto-submit** (Syllabus Practice does not use tab-lock). Answers autosave.

**Where to click.** Any **Start** / **Begin** -- http://127.0.0.1:5173/exam/ (opens with a test id after Start)

**Why it helps.** Exam-day habits: time, review marks, no casual tab-switching on full papers.

**What they see.** Timer, palette colours, mark-for-review, submit -> **Result and analysis**.

# 4. Results and analysis -- the product's heart

This is what you show in a demo after one mock.

**Where to land.** After submit, or **Insights -> My Results** -- http://127.0.0.1:5173/my-results -- then open a row -- http://127.0.0.1:5173/result/

**Why it helps.** A score without a next step wastes the mock. TestVantage names **weak chapters**, shows **time and stamina**, and puts **one-click practice** on the same screen.

## What they see at the top

- Score ring and grade (A+ Outstanding through E Foundation)
- Score %, accuracy %, estimated AIR (from percentile -- labelled as an estimate)
- Correct / wrong / skipped / partial (MSQ) / time
- Versus last attempt on the same paper
- Calibrated standing (only for calibrated papers)

## Insight Coach -- This test

**What it is.** A coach for **this one attempt**. Numbers are always calculated on this computer. If Gemini is set, a short cloud blurb may polish the wording -- it must not invent ranks.

**Why it helps.** "What went well" and "Focus next" in plain language, then buttons.

**What they see.** Summary, strengths, focus list, overall chapter-strength %, then:

- **Practice [weakest chapter]** -> Syllabus Practice with that chapter filled in
- **Full analytics** -> trends over weeks
- **Another mock** -> AI Mock Builder
- Staff may see Question Bank; students are sent to Official mocks

## Deep analysis -- eight tabs

Filter by Overall / Physics / Chemistry / Math or Biology.

| Tab | What they see | Why it helps |
|---|---|---|
| **Overall Score** | Percentile bar; you vs topper / top 10% / top 25% / average | Standing, not only marks |
| **Charts and trends** | Donut, subject bars, trend, radar, short tips | The story at a glance |
| **Insight Coach -- This test** | Same coach again | Stay in analysis without scrolling away |
| **Time and Behaviour** | Seconds per Q vs others; slowest items; time by subject | Finds rushing and freeze |
| **Question-wise** | Each Q with peer difficulty | Review the costly items |
| **Difficulty** | Easy / medium / hard from how others scored | "I only miss hard ones" vs "I leak easy marks" |
| **Chapterwise** | Table + **Focus areas** | The weak-section list |

| | | |
|---|---|---|
| **Stamina** | Four quarters of the paper | Fade in the last hour is visible |

**Question-wise review** (second big tab): tap a Q number -- stem, your answer vs correct, peer %, solution. Filters: All / Wrong / Correct / Skipped / Marked. **Ask doubt** or **Report question** (reports never delete a question).

**Until go-live:** "you vs topper" uses attempts **on this device**. After go-live, the Tour says those averages come from all students on the server.

## How weak chapters are found (honest, simple)

Not a magic "danger" brand. Three related counts from tagged chapters:

1. **This paper** -- a chapter is weak if it has wrongs, skips, or accuracy under 60%. Sorted worst first.
2. **Over weeks (Analytics)** -- same idea across tests; listed if there are wrongs or accuracy under 65%.
3. **Chapter strength** -- a mastery score from accuracy plus how often they saw that chapter. Used to pick practice, Exam Fit, and the Revision Ladder.

If a question has **no chapter tag**, it will not show cleanly. That is why teachers tag before publish.

## What to do next (real buttons only)

The product does **not** auto-open PYQ or Quick Revision. These are the real jumps:

| They click | They land | Benefit |
|---|---|---|
| Practice [chapter] | http://127.0.0.1:5173/practice | Immediate drill on the leak |
| Revision Ladder -> Drill in Practice | Same practice page | Ordered weak chapters, not random |
| Revision Ladder -> Open wrongs | That result again | Re-see the mistakes |
| Form Forecast Insight Coach | Practice / Mock / Career Compass | Form vs exam-day colleges |
| Analytics study path | Practice or Mock Builder | Multi-week plan |
| Placement check -> lock | Today's Target | Diagnostic becomes today's work |
| Ask doubt | http://127.0.0.1:5173/doubts | Peer help on that item |

**PYQ remedy (manual):** Prepare -> PYQ Bank -> Chapter or Syllabus PYQ for that chapter.

**Cheat-sheet remedy (manual):** Prepare -> Quick Revision -> same chapter -> pin to My Formula Sheet.

## Local AI vs cloud (say this in a demo)

| Always on this computer | Only if a key is set and the API is up |
|---|---|
| Weak chapters, mastery, Exam Fit, Revision Ladder, Precision Map, practice AIR numbers | Gemini wording for Insight Coach |
| Question picks for mocks and practice | Optional "narrate this paper" |
| Local draft solutions from the answer key | Fuller Gemini solutions on upload |

| | |
|---|---|
| Quick Revision starter sheets | AI complete of a chapter sheet |

If the cloud fails, the screen stays **Local AI**. Coaching never depends on a key.

---

## 5. Insights -- weeks of form, not one score

### My Results

**What it is.** History of finished attempts.

**Where to click.** http://127.0.0.1:5173/my-results

**Why it helps.** Reopen any analysis in one click.

**What they see.** Score, accuracy, time, open-row.

### Analytics

**What it is.** Trends: average and best percentile, streak, weak chapters, AI study path. Practice AIR lives on Form Forecast -- Analytics points there.

**Where to click.** http://127.0.0.1:5173/analytics

**Why it helps.** One mock can flatter. Weeks of data show the real leak.

**What they see.** Snapshot numbers, weak-chapter list, recommended drills, compact Insight Coach.

### Form Forecast (Exam Fit, Revision Ladder, Precision Map, Insight Coach)

**What it is. Practice form** from real attempts: projected AIR with a **confidence band**, readiness /100, ordered chapters to fix, and time x chapter x type tags. **Not** a separate set of products in the top bar -- they are sections on this page.

**Where to click.** http://127.0.0.1:5173/form-forecast

- Exam Fit: http://127.0.0.1:5173/form-forecast#exam-fit
- Revision Ladder: http://127.0.0.1:5173/form-forecast#revision-ladder
- Precision Map: http://127.0.0.1:5173/form-forecast#precision-map

**Why it helps.** Answers "If I sat tomorrow, where does my *practice* sit?" then "Which chapter first?" then "Am I slow or rushing?"

**What they see.** JEE Main / Advanced / NEET tabs, Practice AIR + band, confidence (Need mocks / Early / Solid / High), Exam Fit score and labels (Foundation -> Exam-ready), ladder with Drill / Open wrongs, Precision tags (under pressure, slow but accurate, fast but wrong, paced and correct, skipped). Link to Career Compass **with the same marks**.

**Honest:** This is not a seat guarantee.

### Career Compass

**What it is.** Exam-day style: marks -> likely AIR and state rank, college-branch match, fees/placements, choice-filling notes. Use **beside** Form Forecast.

**Where to click.** http://127.0.0.1:5173/career-compass

**Why it helps.** Counselling conversation without mixing it up with practice-form AIR.

**What they see.** Exam, marks, category, college list, compare by branch. Disclaimers point to official NTA / counselling sites.

### Exam Pulse

**What it is.** Short briefing: exams, admissions, placements, focus notes. Refreshes when the API is up; otherwise curated notes.

**Where to click.** http://127.0.0.1:5173/exam-pulse

**Why it helps.** Dates and counselling without scrolling social feeds.

**What they see.** Category chips, short notes, refresh.

### Leaderboard

**What it is.** Ranks from real attempts on a chosen test.

**Where to click.** http://127.0.0.1:5173/leaderboard

**Why it helps.** Friendly standing. Local mode may show a development seed; real ranks need real attempts (and the server after go-live).

**What they see.** Test picker, ranks, your place.

---

## 6. Compete -- habit and peers

| Feature | Where | Why it helps | What they see |
|---|---|---|---|
| **Today's Drill** | http://127.0.0.1:5173/todays-drill | One mixed set a day; Merit Points | JEE or NEET pick, start, standing after finish |
| **Peer Pulse** | http://127.0.0.1:5173/peer-pulse | One real friend, not a circus | Spar Code, link, compare streak / accuracy / points |
| **Merit Stride** | http://127.0.0.1:5173/merit-stride | Points, badges, daily Focus Goal | Totals and goal slider |
| **Study Circle** | http://127.0.0.1:5173/study-circle | Friend rooms (not school ERP) | Create/join with Cohort Code, member board |
| **Ask Your Doubt** | http://127.0.0.1:5173/doubts | Help on a result question without copying the whole stem | Text, file, or voice; peer replies |

Peer Pulse syncs when the app server is running. If it is down, the page says it is working offline.

---

# 7. Question Bank -- teachers and admins

Students **never** see this top-nav tab.

**Where to click.** http://127.0.0.1:5173/question-bank

**Why it helps.** The institute owns the bank -- Kota-style tagging, OCR, compose, review -- instead of only renting a packed library.

Hub tabs: **Upload / Saved questions / Review and publish / Question reports / Manage meta**.

## Save mode (Offline / Online)

**What it is.** Offline = this Cursor browser only, sync later. Online = also push when the server on port **3001** is green.

**Why it helps.** Teachers can prepare on a laptop, then go live without losing drafts.

**What they see.** Save mode bar: Server online / offline.

## Smart Compose

**What it is.** Type a question with live math preview, soft checks, AI polish, marks, status, tags -- all bank types (SCQ through passage).

**Where to click.** Upload -> **Smart Compose** -- http://127.0.0.1:5173/question-bank?hub=upload&tab=compose

**Why it helps.** One clean item without fighting OCR.

**What they see.** Stem, options, solution, metadata, save as draft.

## Convert (OCR) and other upload paths

**What it is.** Turn scans and files into drafts. Paths: Convert (one image), Hybrid (stem + option images), PDF crop, Word/PDF/Image, JEE upload test, Bulk paste, JSON, CSV.

**Where to click.** Upload -> **Convert (OCR)** -- http://127.0.0.1:5173/question-bank?hub=upload&tab=single (other tabs on the same Upload hub)

**Why it helps.** Legacy papers become a tagged bank. OCR is **never perfect** -- that is why drafts and confidence exist.

**What they see.** File pick, extracted stem/options, heal, save draft. Printed/exported student sheets and Quick Revision PDFs carry a **TestVantage** name/watermark -- not another brand.

## Draft field confidence

**What it is.** Everyday scores (low / mid / ok) for stem, options, answer, solution, meta.

**Why it helps.** Teachers see what OCR guessed before they publish.

**What they see.** Badges on the draft card / upload form.

## Saved questions -- Draft vs Published

**What it is.** Drafts stay off student papers until someone publishes.

**Where to click.** http://127.0.0.1:5173/question-bank?hub=view

**Why it helps.** Students never sit a broken OCR item.

**What they see.** Draft / Published counts, filters, open a card.

## Review and publish

**What it is.** Queues: all drafts, possible duplicates, untagged, PYQ, ready to publish, needs content fix, review warnings.

**Where to click.** http://127.0.0.1:5173/question-bank/review

**Why it helps.** The student bank stays clean.

**What they see.** Queue chips, publish when ready.

## Question reports

**What it is.** Flags from students or teachers. Staff mark **reviewed**. Reports **never delete or unpublish** a question.

**Where to click.** http://127.0.0.1:5173/question-bank/reports

**Why it helps.** Errors get a queue without wiping the bank.

**What they see.** Open / reviewed list, mark reviewed.

## Gemini trial SCQs

**What it is.** About 10 draft single-correct items per curriculum chapter (or PYQ-style wording for a sitting). **Always draft. Never auto-publish.**

**Where to click.** Question Bank -> **Manage meta** -- http://127.0.0.1:5173/question-bank?hub=manage

**Why it helps.** Fast draft volume for review -- not a dump of official papers.

**What they see.** Exam/subject pick, progress log, drafts in Saved.

## Manage meta, merge, official PYQ

| Feature | Where | Why it helps |
|---|---|---|
| Manage meta | Same Manage hub | Subjects, units, chapters, exam tags stay consistent |
| Merge banks | http://127.0.0.1:5173/merge-banks | Copy questions if you switched between localhost and 127.0.0.1 |
| Approve official papers | http://127.0.0.1:5173/official-pyq | Official PYQ stay pending until Approve -- students only see approved papers |

**Do not wipe the bank.** If it looks empty, merge or copy from localhost -- do not re-upload over a good bank.

# 8. Teaching, papers, school

## Teacher home

**What it is.** Cards: my bank, prepare paper, Lecture Planner, lecture set, upload.

**Where to click.** http://127.0.0.1:5173/teacher

**Why it helps.** One starting hub after teacher login.

**What they see.** Action cards. New teachers typically **cannot** publish or open the main bank until an admin ticks those rights. Their uploads still enter the main Review queue.

## Lecture Planner and lecture set

**What it is.** AI helps plan a class, pick bank questions, suggest teaching order, draft topic notes. Lecture set = items tagged Source = Lecture.

**Where to click.** http://127.0.0.1:5173/teacher/lecture-planner -- http://127.0.0.1:5173/teacher/lecture-questions

**Why it helps.** Classroom flow without a live-class studio. A teacher may add an optional video **link** on a question -- there is no bought video library.

**What they see.** Subject/chapter/time, generated plan, tag questions as Lecture.

## Create, edit, publish papers

**What it is.** Wizard: exam, type, syllabus, counts, marking, AI paper tuning, publish checklist, manifest, assign to a class.

**Where to click.** http://127.0.0.1:5173/create-test -- http://127.0.0.1:5173/edit-test

**Why it helps.** Official mocks students see on /tests.

**What they see.** Steps through to publish review and paper manifest.

## Student results (teacher)

**What it is.** Class attempts; **the same analysis** students get.

**Where to click.** http://127.0.0.1:5173/teacher/results

**Why it helps.** Coaching from the same weak-chapter picture.

**What they see.** Attempt list, open result.

## School Management

**What it is.** Schools -> one school: Dashboard, Classes, Students, Staff, Attendance, Fees, Timetable, Exams (assign mocks), Reports. This is institute ops -- **not** Study Circle.

**Where to click.** http://127.0.0.1:5173/admin/schools

**Why it helps.** People and papers in one place.

**What they see.** School list, then tabs on one school.

### Admin settings

**What it is.** Go-live readiness, OCR settings, export CSV/JSON/full **watermarked** backup, teacher accounts, password.

**Where to click.** http://127.0.0.1:5173/admin

**Why it helps.** Platform controls in one place.

**What they see.** Stats, OCR panel, export buttons, teacher manager.

**Paper Pattern Designer:** a button points to /admin/paper-patterns. That page file exists but is **not wired** in the router today (click currently sends you Home). Patterns still work inside Create test / Mock / PYQ. Treat the standalone designer as **in progress**.

---

## 9. Exams the product is built for

| Exam | Subjects | What students practise |
|---|---|---|
| JEE Main | Physics, Chemistry, Mathematics | About 75 questions, 180 min, SCQ + numerical |
| JEE Advanced | Physics, Chemistry, Mathematics | Mix including multi-correct, matrix, integer, passage |
| NEET | Physics, Chemistry, Biology | SCQ, integer, passage SCQ |

Bank types: single-correct, true/false (CDF), multi-correct (partial marks), matrix match, integer, numerical, passage integer, passage SCQ.

---

## 10. Honest limits (say these in a sales meeting)

- Use **Cursor's browser** at **http://127.0.0.1:5173/**. Edge/Chrome look empty (separate storage).
- **localhost and 127.0.0.1 are different storage.** Merge; do not wipe.
- Cloud OCR, Gemini, Exam Pulse refresh, and bank sync need the API at **http://127.0.0.1:3001**. Keep the bottom terminal open. Offline save still works if 3001 is down.
- No phone app, no live HD class studio, no 12-hour paid mentor desk, no fee-scholarship test.
- Quick Revision exists; it is not a 4,500-video pack or a secret "five most probable questions" list.
- Form Forecast and Career Compass are **not** seat guarantees.
- Gemini drafts are not official NTA/IIT papers.

Go-live checklist: **More -> Go live guide** -- http://127.0.0.1:5173/go-live-guide

## Demo in five minutes

1. **F5** -> http://127.0.0.1:5173/home (student).
2. Prepare -> AI Mock Builder (or a short Speed / Practice) -> submit.
3. Result: **Insight Coach** + **Chapterwise -> Focus areas**.
4. Click **Practice [chapter]** -- Syllabus Practice opens pre-filled.
5. **Insights -> Form Forecast -> Revision Ladder** -- show Drill in Practice and Practice AIR vs **Career Compass**.

Staff encore: http://127.0.0.1:5173/question-bank -> Compose or Convert -> draft confidence -> Review.

---

TestVantage -- professional mock tests and PYQ practice for serious aspirants.
